PROFILE SUMMARY

Senior QA Automation Engineer with **8.5 years of experience** across Banking, Insurance, OTT, SaaS, and Analytics domains. Proven track record of building scalable automation frameworks, leading small QA teams, conducting automation code reviews, and driving quality across the SDLC. Hands-on expertise in Selenium, Playwright, REST Assured, Java, JavaScript, CI/CD pipelines, and AI-assisted testing workflows using Copilot, Cursor, and ChatGPT. Adept at collaborating with developers, product managers, and onshore stakeholders to define test strategies and deliver high-quality releases.

TECHNICAL SKILLS

Automation	Selenium WebDriver, Playwright, Katalon Studio
API Testing	REST Assured, Postman, SOAP UI, Swagger
Languages	Core Java, JavaScript
Frameworks	TestNG, Maven, Cucumber (BDD)
CI/CD & DevOps	Jenkins, GitHub Actions, GitHub
AI Tools	GitHub Copilot, Cursor, ChatGPT — for test generation, debugging, QA productivity
Mobile Testing	BrowserStack, Perfecto
Test Management	JIRA, HP-ALM
Database	SQL
Methodology	Agile-Scrum, Waterfall, SDLC, STLC

KEY HIGHLIGHTS

- Built and maintained end-to-end automation frameworks from scratch, including framework architecture decisions, folder structure, reusable libraries, and CI/CD integration.
- Led automation code reviews for team members, enforcing best practices, Page Object Model patterns, and maintainable test design.
- Guided and mentored 2–3 junior QA engineers on automation techniques, test design principles, and debugging strategies.
- Reduced a 2-hour manual regression cycle (104 API validations) to a 5-minute automated execution using REST Assured.
- Built AI-assisted testing workflows leveraging Generative AI and Agentic AI concepts for test script generation and debugging.
- Extensive use of GitHub Copilot, Cursor, and ChatGPT to accelerate automation development and improve QA productivity.
- Independently managed end-to-end QA for single-resource projects, coordinating directly with onshore leads and business stakeholders.

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Test

Freshworks | Hyderabad | Nov 2025 – Present

- Working in the Analytics domain, supporting reporting capabilities across Freshworks product suite.
- Developing UI and API automation using Playwright and JavaScript integrated with GitHub Actions CI/CD.
- Conducting automation code reviews for team members, ensuring adherence to framework standards and best practices.
- Leveraging AI tools — Cursor, GitHub Copilot, and ChatGPT — for faster test script generation, debugging, and coverage analysis.
- Collaborating with developers and product managers to define test strategies and acceptance criteria for new features.

Senior Software Engineer — Test

ValueLabs | Hyderabad | Jul 2021 – Oct 2025 | Client: M7 Group

- Led automation efforts for the M7 Group (DTH/OTT domain), owning the end-to-end automation strategy and framework.
- Guided 2 junior QA engineers on automation scripting using Katalon Studio, conducting regular code reviews and walkthroughs.
- Automated API and regression workflows using Katalon Studio and REST Assured, reducing a 2-hour manual regression process with 104 API validations to a 5-minute automated execution.
- Performed Web, API, and Mobile testing using Selenium, BrowserStack, and Perfecto across multiple environments.
- Collaborated with developers and Business Analysts to triage defects, review requirements, and maintain test documentation in JIRA.

QA Engineer

Kanerika Software | Hyderabad | Aug 2020 – Jun 2021 | Client: Traxtech

- Performed functional, regression, and API testing for enterprise SaaS applications (Traxtech — Transportation Spend Management).
- Developed and executed automation scripts using Selenium WebDriver with Cucumber BDD framework.
- Created test scenarios and managed test cases using JIRA; coordinated with onshore QA lead daily.

Test Analyst

Capgemini Technology Services | Hyderabad | Oct 2017 – Aug 2020

- Worked across three projects in Insurance (State Farm) and Banking (Royal Bank of Canada) domains.
- Developed automation scripts using Selenium WebDriver for investment banking transactions including contributions, withdrawals, and fund switches.
- Independently handled end-to-end QA for the EBG Off-Portal regression project as a single-resource QA owner.
- Performed Mobile testing using Perfecto for the Auto Quote Purchase web application (State Farm).
- Managed test cases and defect lifecycle using HP-ALM across all projects.

PERSONAL PROJECT

Dileep's Weather Report — Full-Stack Web App

Independently designed, developed, tested, and deployed a weather application consuming the OpenWeatherMap API. Built using HTML, CSS, Bootstrap, and JavaScript. Demonstrates hands-on API integration and full product ownership.
